

# D Task 10.1 - Further Improving Personalized Learning Experiences App

## Overview

This assessment task intends to further improve the **Personalized Learning Experiences App** that you developed in Task 6.1D.

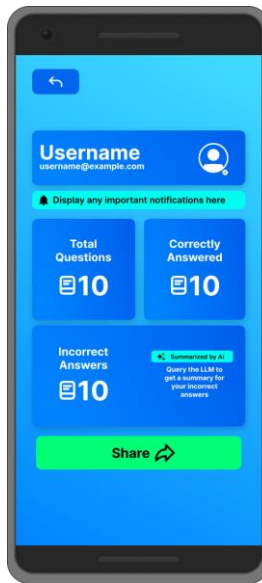

Your task is to add 3 new screens, and implement History, Sharing and Purchasing features into the app. You may utilize the provided designs for reference. Look for better ways to ensure that the app feels seamless and fluid. You may use different payment APIs. It's not limited to Google Pay.

Finally create a 2 paged report compiling all the features that your app provides and how it adheres to modern android development practices and how LLMs can be used to further improve the App.

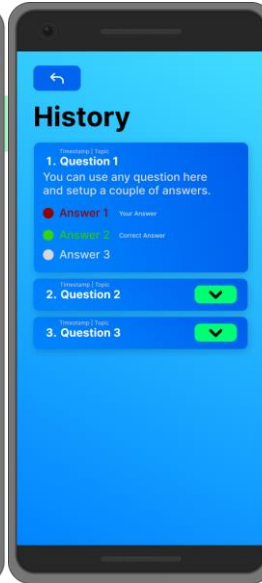

## Special Notes

1. You may work closely with your tutor to get assistance on implementing new routes to the backend API and setting up a new model schema for MongoDB Atlas.
2. Sharing features can be of different methods, you can generate a QR code and send the generated QR code as a message to different platforms. It could also be a link that includes all your public profile data.
3. Before implementing your option of sharing, discuss with your tutor on how it can be implemented.
